

Packet-preserving fixed-volume cell bridge (conditional S2 selection)

Security and feasibility contract

RN-L first: for every admitted transaction class, outer size, count, direction, and slot schedule are independent of true inner length.

Loss/overflow: emit the fixed cover transcript, deliver no partial inner frame, and allow no adaptive public retransmission or error oracle.

Hard condition: prove both P4 ↔ ens1/bf_kpkt paths, metadata semantics, timing, resource fit, and fail-closed behavior before relay use.
