Paper Structure (Post-meeting)

- Introduction (1 page)
- Background (1 page)
  - Power grid basics and ICS network protocol: on how to map control units into numerical indices; types of indices, example of the configuration files extracted from SEL relay.
  - ICS device fingerprinting: why and how to use CLRT
  - Programmable network switches
- NOMAD Design Overview (1 page)
  - Motivation example: TCP's delayed ACKs make the original method not applicable; requires flexible obfuscation mechanisms
  - Overall component:
    - Obfuscation infrastructure
    - Obfuscation strategies
    - Obfuscation objectives and constraints
- Obfuscation infrastructure (1.5 page)
- Obfuscation strategies (1.5 pages): including three example strategies
- Obfuscation objectives and constraints (1 page)
- Evaluation (4.5 pages)
- Related Work (1 page)
- Conclusion and acknowledgments (0.5 page)
